COMBINED LISBON MEETING ON HIP REVISION ARTHROPLASTY

1st December, 2018 | CUF Descobertas Hospital, Lisbon

GENERAL
- Hip anatomy relevant in hip arthroplasty revision
- Surgical approaches in revision arthroplasty
- Evaluation of the painful total hip arthroplasty
- Acetabular and femoral bone defect classification
- Removal of well fixed implants and cement
- Revision of metal on metal arthroplasty and for taper corrosion
- Total hip in young patients under 50 years

ACETABULAR RECONSTRUCTION
- Acetabular reconstruction with augments. Technique and pitfalls
- Acetabular reconstruction with reinforcement rings. Technique and pitfalls
- Impaction grafting in acetabular reconstruction: technique
- Management of pelvic discontinuity
- 3D custom made implants
- Hip revision surgery: the ladder of acetabular reconstruction

FEMORAL RECONSTRUCTION
- Cemented femoral revision
- Cementless stems – Monoblock or modular?
- Strategies for femoral bone loss in Paprosky type I to IIIA defects
- Strategies for femoral bone loss in Paprosky type IIIB and IV defects

COMPLICATIONS
- Instability
- Trochanteric pain and abductor deficiency in hip arthroplasty
- Periprosthetic acetabular fractures
- Periprosthetic femoral fractures

INFECTION
- Diagnosis of periprosthetic hip joint infection
- Management of the early infection
- Getting the right systemic and local antibiotics
- One stage revision in periprosthetic infection. When and why
- Two stage and partial two-stage revision
